Mactan-Cebu International Airport

POLICY COMMITMENT TO CARBON EMISSIONS REDUCTION

Mactan-Cebu International Airport (MCIA) recognizes the need to act upon the pressing effects of climate change to the planet and to the people. MCIA is committed to protect the environment and reduce our impact on global warming and align with the global climate targets. MCIA commits to embark on a journey towards net-zero carbon emissions by managing our carbon emissions through the implementation of energy conservation programs and initiatives in accordance with applicable regulatory and statutory requirements.

MCIA ensures that the following carbon management strategies in place are continuously implemented and improved to significantly reduce our carbon footprint:

- Ensure proper energy consumption and fuel consumption measurement and recording.
- Monitor energy harnessed from the existing solar power plant and expand it or use other renewable energy sources in other areas of the airport.
- Purposely use energy-efficient equipment and facilities and actively apply new technologies to build a more energy-efficient airport.
- Continuously monitor the emission quality of air pollution source equipment in the airport and ensure that preventive maintenance is performed.
- Explore other initiatives to reduce carbon emissions.
- Promote energy conservation practices and raise awareness to all employees in MCIA.

Approved:

JULIUS G. NERI, JR.

General Manager & CEO
